Equiduct Application Questionnaire

Guide to completion

Question	Notes
2	A "Display" application is a terminal, or other graphical user interface, tool or application which only shows market data on a screen or display. Anything else – including, but not limited to, capturing/storing data, performing calculations with data, accessing data in applications such as Excel or Tableau, or sending data elsewhere – is a "Non-Display" application.
3	Web applications are viewed in a browser such as Internet Explorer, Microsoft Edge, Google Chrome, Safari or Firefox. Applications which are launched from elsewhere – such as the Start menu on a Windows PC or the Dock on a Mac – are classified as "desktop" applications. A mobile app is an application which can be installed and used on mobile devices such as smartphones and tablets.
4	If I am a user of the application, and the application has both a desktop and smartphone app, can I use the same login details on my desktop and my smartphone?
6	Delayed data is anything more than 15 minutes old, so includes end-of-day data as well as overnight/next day data.
10	If you receive data directly from Equiduct, please write "Direct client" here
11	Please give an indicative/estimated number if possible. Exact figures will be required for monthly usage reporting.
13	"external" means anyone who does not work for your company
15	For example: can I login with the same username and password on a desktop and smartphone and view data on both at the same time?
16	Examples of exporting include, but are not limited to: cut and paste, download or link to Excel, export/sharing to other services etc.
